

19/3/2014

Newtown 3220

3A/195 Colac Rd
Waurm Ponds, VIC, 3216

ATTENTION: MS. SARAH HENDERSON, MP

You have been recommended to me by Natalie Houghton of the Jane Goodall Institute as someone who might be able to help in the matter I outline below. I have previously written to the Victorian MP for Geelong as well as the Victorian Minister for the Environment and Climate Change on the 7th March, but have yet to receive a reply from either from them.

I wish to express my concern about what I perceive to be happening in our skies of late, and the effect this may be having on the quality of our air/rainwater, not to mention the general health and well-being of those who reside under same skies – among them, your constituents.

In particular I would like to draw your attention to eyewitness accounts, including my own, of what appears to be *extensive aerosol spraying* from jets, commercial and/or otherwise, and its observed effects, of which those documented at ChemtrailsGeelong.com for example, are typical. Aside from the obvious effects of sunlight reduction and weather modification, I am concerned also about the possible use of nano-particulates of oxides, salts and elemental forms of toxic metals such as Aluminium, Barium and Strontium for example, in the observed phenomena. Please refer carefully to said website for an idea of the substance of my concerns. I have attached also an information sheet I have distributed to Greater Geelong residents about this.

Simply stated, I wish to be assured or confirmed one way or the other about this issue, and trust you will agree, ***the only way to go beyond mere speculation is to conduct proper tests according to sound scientific principles.***

I note that the CSIRO has published a report entitled "New insights to the chemical and isotopic composition of rainfall across Australia" (June 2012) detailing compositional analysis of rainwater samples taken from a wide variety of locations across Australia, and conducted over a period of five years from 2007 to 2011 inclusive. May I suggest that the same tests (in particular those for rainwater *chemistry* only), be conducted over a similar length of time, but this time with the inclusion of Barium also as an analyte and Greater Geelong specifically as the location, and with results published quarterly online for easy and regular access and perusal by the Greater Geelong public.

Critically, a corresponding and ongoing test could also be conducted by the EPA for air quality.

The above mentioned CSIRO document makes it clear that at least in so far as rainwater testing goes the collection equipment is particularly simple and inexpensive (see pg. 11), the task not labour intensive, and my own inquiries into the (NATA accredited) lab end of the process reveal that this too is not a prohibitively expensive procedure for tests for soluble metals. In fact I intend to collect my own rainwater samples by and by, with the view to obtain and publish online the results of such tests, at my own expense, as well as to encourage as many other Geelong residents as I am able, to do likewise, so that, in addition to informing ourselves, these tests may be compared against any findings of government.

Please do all that you can on behalf of the people of Greater Geelong to bring this matter to the attention of Parliament so that public resources might be allocated for the purpose outlined above.

Yours Sincerely,

Stuart [REDACTED] ([REDACTED]@chemtrailsgeelong.com)

SARAH HENDERSON MP

Federal Member for Corangamite

Mr Stuart [REDACTED]
[REDACTED]
Newtown VIC 3216

Dear Mr S [REDACTED]

Thank you for your correspondence with my office requesting CSIRO to conduct further rainwater testing in the Geelong region.

In response to your concerns, I have written to the Hon Ian Macfarlane, Minister for Industry, a copy of which is enclosed.

I will write to you again once I receive a response from the Minister.

Please do not hesitate to contact me if you have further concerns regarding this or any other issue.

Yours sincerely

Sarah Henderson

COPY

Dear Minister

CSIRO rainwater testing

I write on behalf of Mr Stuart [redacted] of Newtown in regards to rainwater testing conducted by CSIRO across the Geelong region.

Mr S [redacted] is concerned about eyewitness accounts of aerosol spray from jets and its alleged effects on weather patterns and sunlight.

Mr S [redacted] has cited a CSIRO report published in 2012 entitled, "*New insights to the chemical and isotopic composition of rainfall across Australia*" and requested the same tests for rainwater to be conducted across the Geelong region.

A copy of Mr S [redacted]'s letter to me regarding his concerns is enclosed.

Thank you for your consideration and I look forward to hearing from you at your earliest convenience.

Yours sincerely

Sarah Henderson

Waurm Ponds, VIC, 3216

Dear Ms. Henderson,

You may recall I wrote you on 19/3 to express my concerns about observed deployment of weather modification technology over the skies of Greater Geelong. I am writing now to thank you for your reply of 5/5 and the steps you have taken - I look forward to hearing from you again regarding the Minister, Mr. MacFarlane's reply.

May I ask if the Minister will be considering tests for both rainwater *and* air quality, or only the former by the CSIRO? I ask because, as previously suggested, both tests, ongoing and run simultaneously, would provide a sounder, more comprehensive basis for drawing conclusions about this issue than one alone.

Actually I only received your letter the Thursday before last – I have been staying at Little River for some weeks and only recently had some mail forwarded to me for collection at the General Store/Post Office here.

Could you please have your staff send also a soft copy (to the email address below) of any hard copy mail you send me in the future? I would be most grateful. There is a good chance that I will be on the road from the middle of June onwards, perhaps for some months, and expect that email will be the most reliable way of reaching me during that period.

Regrettably, I cannot report any improvement in the situation I described in my first letter. I have been updating the website ChemtrailsGeelong.com accordingly and have also included the news of your own reply and steps taken to date. Without going into any great detail here I might just draw your attention, if I may, to the fact that Greater Geelong has had only one truly clear day (May 8th) in the time period February 23rd to the present day. Surely this is at least highly unusual, if not unprecedented.

I have also posted on said website compelling photographic evidence taken recently (May 21st) of the skies over Little River indicating the likely deployment of “Australian Rain Corporation” cloud-making type technology, the (tax payer subsidised) development of which was reported as far back as 2007 by Tanya Nolan and Anna Salleh of the ABC. Please note that this technology produces water vapour based artificial cloud matter and hence, unlike persistent contrail technology (“chemtrails”), cannot be detected using chemical compositional testing of rainwater and air. (Additional note not included in original letter: further observations since writing this have led me to conclude that chemtrail technology and the “ground based device” discussed in the ABC report are almost invariably, if not always, used together so that any clouds produced in this way will contain, at least to some extent, the tell-tale chemical compositional anomalies of chemtrails.)

You may be aware that in 1976 the United Nations passed resolution 31/72 “Convention on the Prohibition of Military or Any Other Hostile Use of Environmental Modification Techniques” for the purpose of averting the potential dangers of such uses to the general welfare. In light of this I would like to raise here the following questions:

1. Is the Australian Government able to *guarantee* the people of Greater Geelong at this time that Environmental Modification (EnMod) techniques are **not** being used currently for hostile purposes against civilian targets in Greater Geelong?
2. Is the Australian Government able to *guarantee* the people of Greater Geelong at this time that (unregulated) EnMod techniques are **not** being used for *any* purpose, intentionally hostile or otherwise, by the private or public sector, in such a way as to significantly alter the environment/weather of Greater Geelong, and without public disclosure of the nature and purpose of said modification, so that the people of Greater Geelong are effectively denied their part in the decision making process as to the propriety of said modification. Or, if such disclosure/notification(s) *have* been made, could you please refer me to the authority whereby the people of Greater Geelong might be informed about them.

3. And, finally, if in fact the Australian Government claims to be able, in all good conscience, to make either or both guarantees above, can you please refer me to the existing Australian federal laws and *effective* attendant (PTO) monitoring authority and protocol by which such guarantees are given their substance? (Please note that Air Services Australia is demonstrably *not* an effective monitoring authority for the use/misuse of EnMod technology in our skies at present.)

Now, if I might have your attention just a little longer to consider the significance, if in fact, as the mounting evidence suggests, the Australian government is *not* able to make any guarantees *of substance* to the people of Greater Geelong or elsewhere in Australia regarding the use of EnMod at this time. There could be, may I suggest, only three possible causes for such a position viz. ignorance, impotence and complicity. Perhaps you could let me know which one or combination (or alternative) best describes the Australian government's current position in this matter:

i). The Australian government is ignorant or unconvinced of significant use/misuse of EnMod technology in the skies over Greater Geelong and elsewhere in Australia at this time. This ignorance/lack of conviction, we must assume, has somehow managed to endure despite all the resources presumably available to the Australian Government to observe it, and despite the increasing number of Australians and residents of Greater Geelong for whom all reasonable doubt has been removed by simply looking up and using our eyes (and/or cameras). Alternatively the Australian government may be ignorant not so much of the widespread use of EnMod technology in Greater Geelong/Australian skies at present (regarding which it is perhaps largely indifferent/impotent), *but of the dire need to regulate it on behalf of the general public*. In either case tests such as chemical compositional testing of Greater Geelong rainwater by the CSIRO, and tests for air quality by a competent authority also, may help to remove any reasonable or unreasonable doubts the government may have regarding these issues, and one would hope, within a time frame that takes into account the inherent urgency of the circumstances to the people of our city/nation. The key here surely is education/information, not only for government, but especially the general public to whom presumably the government looks for mandate to act.

ii). The Australian government is impotent to do anything about the use/misuse of EnMod technology at this time. In which case your assistance on behalf of the people of Greater Geelong, in bringing to the attention of Parliament the present deficiency of law and attendant monitoring authority and protocol regarding EnMod technology, would be of inestimable value - nothing could be more critical to the welfare of Australians at this time, in my opinion, alongside and in furtherance of the education of the public as to what is going on. *In short, does the Australian government admit the people of this nation's right to be a part of the decision making process with regards who exactly is appropriating their weather at any particular time, and for what purpose? And is it willing to legislate where necessary to protect that right?* After all, at the risk of stating a truism, surely the Australian environment/weather belongs to *all* Australians, and no-one in particular (we must *all* live with it), and not exclusively to those who myopically believe that it is in their interest to modify it at any particular time and place, and have the money to pay for it, and/or the influence to authorise it.

iii). The Australian government, or part thereof, is in some way complicit in the heavy and widespread use of EnMod technology in the skies over Greater Geelong and other *populated* areas across Australia, at this time, and has either disclosed the details of such use (place, time period, nature and purpose) to the public, or has not done so for reasons also undisclosed. If the former is true, then again, could you please let me know the details of said disclosure/notification(s) or refer me to the authority whereby the Greater Geelong public might be informed regarding them. But if on the other hand the latter is true and the failure to disclose is deliberate policy, then we might reasonably expect only misdirection, evasion, delay and disinformation from the government regarding this issue. It is difficult to imagine such a position having any kind of an *honourable* basis, and I must admit that my own observations and investigations into this matter have not permitted me to entirely dismiss this disturbing possibility, though I would welcome the opportunity. But perhaps this is a matter best left to your own conscience and judgement at this time.

Your attention and assistance in this matter are much appreciated.

Yours Sincerely,

Stuart [REDACTED] ([REDACTED]@chemtrailsgeelong.com)

Dear Mr S [redacted]

Thank you again for your correspondence with my office requesting CSIRO to conduct further rainwater testing in the Geelong region.

I have received my reply from the Hon Ian Macfarlane, Minister for Industry, a copy of which is enclosed.

As you are a resident of the Corio electorate, may I ask that you contact Senator the Hon. Michael Ronaldson, in his capacity as the Patron Senator for Corio for any future issues you may wish to raise.

Yours sincerely

Sarah Henderson

Ms Sarah Henderson MP
Member for Corangamite
3A/195 Colac Road
WAURN POND VIC 3216

MC14-001759
CSIRO Ref: C2014/4430

Dear Ms Henderson *Sarah*

Thank you for your letter of 5 May 2014 on behalf of your constituent, Mr Stuart S [REDACTED] regarding jet vapour trails.

Mr S [REDACTED] referred to the CSIRO report *New insights to the chemical and isotopic composition of rainfall across Australia* and requested that similar tests be conducted on rainfall over the Greater Geelong region to understand the effects of jet vapour trails on rainfall composition.

The CSIRO report presented data for the chemical and isotopic composition of rainfall at 21 locations across Australia in a form that would be of use to other people undertaking hydrological studies. The report did not investigate the effects of jet vapour trails on rainfall composition.

Conducting a similar analysis on rainfall in the Greater Geelong region would not resolve Mr S [REDACTED]'s fundamental question about the effects of jet vapour trails on rainfall composition or weather. An alternative methodology to answer that question would be required, and CSIRO is not undertaking any research into this topic.

I trust that this information is useful.

Yours sincerely

Ian Macfarlane

Waurin Ponds, VIC, 3216

Dear Ms. Henderson,

Thank you for your reply dated 4/7/2014 to my last letter of the 10/6/2014.

Unfortunately you seem to have overlooked my request that a soft copy be sent to my email address in addition to the hard copy. As I made clear in my last letter, I was about to set forth on a road trip of some months duration and such an oversight has had the foreseeable result of delaying my receipt of your letter by almost four months, in fact, until just some days ago.

May I ask if you did send also a soft copy to my email address?

Regarding your request that I address any further queries or issues to the Patron Senator for Corio, I would be glad to do so, but since I reside presently in Newtown at the address above and was, when I wrote you last, only staying at Little River temporarily, I am wondering if in fact Mr. Ronaldson might be the most appropriate recipient for my correspondence? Or if rather it might not end up being simply another cause for delay when I am asked to redirect my queries again to yourself.

In any case, since it is with specific reference to the Minister of Industry's own reply that I now make some further queries regarding it, could you please forward this letter to the Minister on my behalf?

Firstly, I am unclear about the Minister's frequent reference to the jet trail phenomena I described in my previous letters and online at ChemTrailsGeelong.com, as jet "vapour" trails. Does he understand that I am not referring to ordinary jet condensation trails? And if not, is he willing to take a little time to inform himself properly about this important and critical distinction?

To that end might I suggest, at least by way of introduction, to view the following short video taken in the Northern Territory www.youtube.com/watch?v=hZSRgCv9cs4, showing two jets in more or less the same sky space, each with a trail clearly distinct from the other – one something like the ordinary short lived jet contrail one has been accustomed to seeing for decades, and the other something else entirely. It is trails exemplified by this latter, persistent and widely dispersing trail that I, and many other Australians, are presently concerned about.

On the other hand if the Minister is well aware of the distinction, then the frequent use of the innocuous and ordinary sounding term, jet "vapour" trail, is misleading. Surely it is precisely the chemical composition of these newly observed persistent and widely spreading jet trails that is being called into question. It is hardly an objective approach to presuppose the composition of these trails, by referring to them as "vapour" trails, in the absence of any citable, objective scientific test results to support that label.

Regarding my request that the CSIRO conduct tests for chemical composition of rainfall in the Greater Geelong region similar to those documented in their report *New insights to the chemical and isotopic composition of rainfall across Australia*, I note that the Minister had this to say:

"Conducting a similar analysis on rainfall in the Greater Geelong region would not resolve Mr. ██████████'s fundamental question about the effects of jet vapour [sic] trails on rainfall composition or weather. An alternative methodology to answer that question would be required, and CSIRO is not undertaking any research into this topic."

If by this the Minister means to imply that the tests I suggested would not be conclusive *per se* as to the *cause* of any detected rainfall compositional anomalies, then of course I cannot disagree with him. But it

seems to me that any genuinely comprehensive research into the effect of persistent and widely dispersing jet trails on rainwater, the general environment and weather is going to have to include at some stage tests for anomalous/alarming quantities of specific particles in the atmosphere, the specificity to be determined by previous compositional analysis of samples taken directly from the trails themselves. Or perhaps too, by inspection of the planes on the ground immediately before or after landing – what could be simpler?

Surely the Minister does not mean to imply that the effect of persistent and widely dispersing jet trails on rainwater can be seriously investigated *without* rainwater compositional analysis?

Rainwater testing, I gather, is particularly inexpensive and easy to implement, though weather-dependent. The previous above-mentioned CSIRO report provides an already existing background for comparative analysis and may facilitate the identification of recently occurring anomalies. Apropos of that, I also suggested air quality testing in my original letter, but note that the Minister has not referred to this at all. Both these forms of atmospheric testing, air and rainwater based, seem likely at this time, given recent nation-wide observations, to reveal ongoing anomalies in our atmosphere alarming or indicative enough to warrant further investigation to establish their cause. What can there be to lose by implementing such tests? Except perhaps public ignorance and misconceptions.

But in any case if the Minister feels that the tests I suggested (for both rain and air quality in the Greater Geelong region) would not resolve my “fundamental question about the effects of jet vapour [sic] trails on rainfall composition or weather” then by all means could he please detail the “alternative methodology” he mentioned, and better still, see that it is implemented?

In short, is the Minister willing to commission the implementation of objective scientific tests to determine conclusively and exactly the chemical composition of these newly observed, persistent and widely dispersing jet trails in Australian skies, and to explain to the Australian public the purpose and justification (if any) for their widespread deployment and for whatever it is that is presumably raining down continuously on our unsuspecting heads and into our respiratory systems and general environment at present? Not to mention their observably patent effect on our weather.

After all, for the Minister to simply tell me that the “CSIRO is not undertaking any research into this topic”, when in fact he is in a position to direct them, or any other government research facility, to do so, and apparently aware that a direct request to that effect is the “fundamental question” of my original letter, seems to me evasive.

Perhaps too, the Minister (or the Minister of Defence) might give me some of the assurances I requested in my last letter, and which you have not referred to at all, regarding any Australian government complicity in the use of weather modification (ENMOD) technology in Australian skies, especially those uses in contravention of international agreements. Or do I understand that the Australian government would prefer at this stage to avoid making any such assurances to the Australian public?

Yours sincerely,

Stuart

Waurin Ponds, VIC, 3216

Dear Ms. Henderson,

I refer to my letter of 10 November 2014 and the email reply of yourself and Mr. Bushell of 16 November and 2 December respectively.

You may recall that we had been discussing since March 2014 the availability and widespread use of (toxic) technologies for the production of artificial/artificially induced cloud cover and weather modification.

(For our complete correspondence to date please visit:
ChemTrailsGeelong.com/uploads/SHcorrespondence.pdf)

As I have not heard anything since Mr. Bushell's email of 2 December, can you please let me know if I am correct in assuming that the Minister of Industry, Mr. MacFarlane, has failed, to date, to reply to the letter that you forwarded to him on my behalf as per your email of 16 November 2014?

Unfortunately, though a response from the Minister does not appear to be forthcoming, our increasingly anomalous weather is telling its own story in day after day of largely overcast skies; anomalous in *any* season, and precisely the kind of meteorological conditions one would expect if the technology I brought to your attention in my previous letters were intensively deployed.

In light of this, I find it difficult to conceive of a good reason why your constituents should continue to trust a government that, it would appear, has adopted a policy of misdirection and evasion regarding an issue of the gravest possible consequence to their general welfare. It is, in my opinion, disgraceful, if not criminal.

Thank you for your own assurance and that of Mr. Bushell that any future correspondence from yourself will be emailed. Please note again my request for both forms of reply, email and regular mail (to regular mail from myself) - it did not seem to me entirely clear in Mr. Bushell's email if the request for *both* forms was understood.

Yours Sincerely,

Stuart [@chemtrailsgeelong.com](mailto:stuart@chemtrailsgeelong.com))
